

INFORMS Website

For Future Rice INFORMS Members Who Need to Edit the Website

Contact a current member of the INFORMS Firebase to do the following:

1. Click on the gear (settings) icon under "Project Overview" on the top lefthand side of the rice-informs Firebase. Click on "Users and Permissions"
2. Add the next INFORMS board members in charge of the website to the project by clicking "Add member." Give them *Owner* permissions.

To change admin privileges:

1. Go to google firebase. The project is currently only owned by beckedwards314@gmail.com and called rice-informs.
 - *Note: You will need to have access to the Firebase to do this!*
2. Go to build -> authentication -> sign in method to add more sign in methods (currently, only google is allowed)
3. To change the emails with admin (developer) privileges, go to Build -> Firestore Database -> Rules and add emails to the list that looks like:

```
allow create, update, delete: if request.auth != null
    && request.auth.token.email in [
        "bae5@rice.edu",
        "beckedwards314@gmail.com"
    ];
```

4. In `dlab-admin` and `events-admin` on the website files under `assets/js/..`, add the desired emails to the Set `ADMIN_EMAILS` that looks like this:

```
const ADMIN_EMAILS = new Set([
    "bae5@rice.edu",
    "beckedwards314@gmail.com"
    // "other@gmail.com"
]);
```

Calendar on Events Page

- Automatically populated from the [Rice INFORMS Calendar \(Public\)](#)

- **When adding an event:** Ensure there is a
 - (1) Location
 - (2) Description
 Otherwise, the fields will show up as empty on the website.

Events Spotlight

- *Yeah...* you're going to have to edit the raw html for this one (because there's no simple and free way to upload images without paid plans that I could find).
 1. Navigate to the file `events.html`
 2. Look for `<section class="events-spotlight section">`. Everything between this tag and the `</section>` tag is a part of the events spotlight.
 3. **To add a single event:**
 - a) Find the tag that looks like `<button class="spotlight-item is-active" type="button"... </button>` and copy/paste it directly under `<div class="spotlight-list" role="list" aria-label="Spotlight events">`, above all the other `<button>`'s. This will put it at the top of the events spotlight list.
 - b) Upload a thumbnail image for the event to the folder `assets/img/spotlight/`
 - c) Change the strings after the fields
 - `data-title=` : The title of the event
 - `data-subtitle=` : A subtitle for the event
 - `data-caption=` A caption for the event
 - `data-img=` The path to the thumbnail image for the event
 - d) Change the text inside `<div class="spotlight-item-title">TEXT</div>` to the title of the event
 - e) Change the text inside `<div class="spotlight-item-meta">TEXT</div>` to the date of the event (e.g. Thu, Feb 6 · 6:00 PM)
